FITTING YOUR QT BASS DRUM SILENCER PAD

FOR EASY FITTING LAY YOUR BASS DRUM ON THE FLOOR (A CARPETED SURFACE WILL PROTECT THE RIM OF YOUR DRUM)

- Place the pad on the drum head with the cut out shape at the bottom where you usually fit your pedal.
- Starting at one side of the drum, attach the elastic band to one of the tension rods at the bottom of the bass drum.
- Stretch the other end of the elastic band to one of the tension rods at the top of the bass drum.
- Make sure that the rubber grommet is positioned so that the flat surface is flush with the pad.
- At the bottom of the drum stretch the elastic band to the next tension rod, creating a triangular shape. Depending on the size of your drum you can repeat this at the top if you wish.
- Follow the instructions as detailed above to fit the other elastic band and grommet.

DO NOT FIT THE BAND IN A POSITION WHERE IT WILL INTERFERE WITH THE BASS DRUM PEDAL ACTION & AVOID OVERSTRETCHING IT.
